

SOVEREIGN GENETICS

Forbidden Dream

Forbidden Fruit x Geist OG

CODE: SF-T12A

THC	21,56%
CBD	0,19%
TERP	4,63%
GENOT YPE	Sativa dominant hybrid
DAYS	9 - 10 WEEKS
SEX	FEMINIZED
MAIN TERPENES	β-Myrcene - β-Caryophyllene - Limonene

This genetic exhibits citric, acrid and gassy overtones backed by sharp pine, orange peel and black pepper aromas.

PLANT MORPHOLOGY

This plant meets the needs of the grower in terms of both bud production and resistance to disease, and highly satisfies the demanding palate of the connoisseur.

Rapid and vigorous veg periods allow for faster movement into flowering periods, when plants will require more than average nutrition.

Plants will develop large, thin, Sativa-dominant fan leaves. Indoor veg time can be shorter as plants will double in size during the first couple of weeks of the flowering period. Ideal for hot and dry climates outside, finishing with large elongated colas accented by high resin counts.

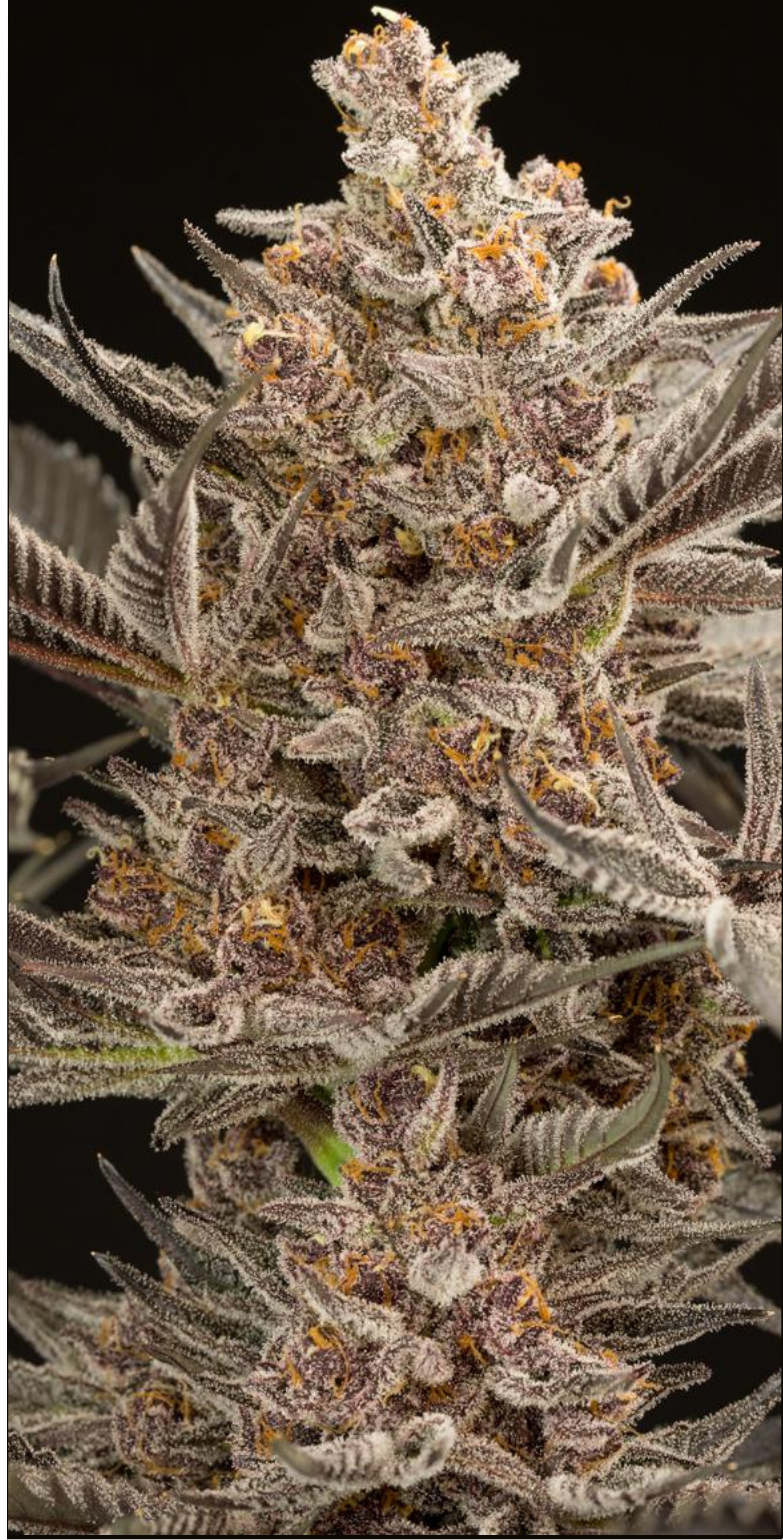

GROWTH CHARACTERISTICS

A strain to be enjoyed by even the most experienced growers

Modest amounts of nitrogen to support early and later stages will allow for healthy dark green fan leaves to maintain vigor.

For indoor grows, 6-9 plants are acceptable per square meter contingent on pot size and veg time. Trellising is recommended to support large bud development.

In addition, double trellising will allow for long-season production to maximize the plant's capabilities. Manicuring and thinning of growth underneath primary layers of canopy in early stages of flowering will maximize large terminal colas and secondary layers of development.
